QUESTION 1

A finance manager needs a weekly summary of outstanding invoices grouped by customer. Which SuiteAnalytics tool provides this directly without custom scripting?

- A. Saved Search
- B. SuiteScript Report
- C. SuiteFlow Workflow
- D. CSV Import

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation: Saved Searches can summarize and group data by fields such as Customer and display totals, making them ideal for outstanding-invoice summaries.

QUESTION 2

You create a report in NetSuite but notice it doesn't include the latest transactions. What must be done before re-running the report?

- A. Refresh the report dataset.
- B. Rebuild the workbook filters.
- C. Clear the system cache.
- D. Re-deploy the script definition.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation: Reports and datasets in SuiteAnalytics are refreshed manually to include the most recent transactional data.

QUESTION 3

A sales director wants to view monthly sales performance by region with drill-down capability to individual orders. Which feature provides this functionality?

- A. Pivot Table in SuiteAnalytics Workbook
- B. Basic Summary Search
- C. Standard Dashboard Portlet
- D. Custom Role Permissions

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation: SuiteAnalytics Workbook's pivot tables allow visual summaries with interactive drill-down into transactional details.

QUESTION 4

A Saved Search is returning duplicate customer rows. What is the most efficient way to eliminate duplicates?

- A. Use the “Show Unique Records” option.
- B. Add a filter to exclude null values.
- C. Enable the “Allow Empty Results” checkbox.
- D. Change the search type to Transaction.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation: The “Show Unique Records” option removes duplicate rows when multiple joined records exist.

QUESTION 5

A user wants to create a KPI on the dashboard showing the total number of new customers created this month. Which data source should be used?

- A. A Saved Search on the Customer record type
- B. A Summary Report on transactions
- C. SuiteAnalytics Connect
- D. CSV data uploaded weekly

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation: KPIs can pull metrics from Saved Searches based on record types such as Customer to display dynamic counts.

QUESTION 6

When building a SuiteAnalytics Workbook, what is the main advantage of using datasets instead of direct Saved Searches?

- A. Datasets support multiple joins and advanced visual analysis.
- B. Datasets execute faster because they bypass governance.
- C. Datasets automatically export to Excel on schedule.
- D. Datasets replace all Saved Search functionality.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation: Datasets combine multiple record types and enable pivoting, charting, and visualization beyond standard Saved Search limits.

QUESTION 7

A controller needs to compare budget versus actual revenue within one report. Which feature supports this requirement?

- A. SuiteAnalytics Workbook with joined datasets
- B. Scheduled Saved Search
- C. Client Script with custom fields
- D. Workflow Email Notification

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation: SuiteAnalytics Workbook can join data from budgets and actual transaction datasets for comparative financial analysis.

QUESTION 8

You scheduled a Saved Search to email results every Monday morning. However, users report that emails stopped arriving. What should be checked first?

- A. Verify that the Saved Search is still marked as public.
- B. Confirm that the schedule is active and the owner's role still has permission.
- C. Re-create the search with a new ID.
- D. Clear the browser cache and re-login.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation: If the search owner or role loses permission or the schedule is disabled, automated email delivery stops.

QUESTION 9

An analyst wants to add a calculated field showing "Profit = Amount - Cost" in a Saved Search. Which NetSuite feature enables this?

- A. Formula Field using SQL or NetSuite functions
- B. Advanced PDF Template
- C. Workflow Action Field
- D. CSV Import Formula

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation: Formula fields allow custom calculations using built-in NetSuite functions within a Saved Search or report.

QUESTION 10

A dashboard displays multiple portlets with sales KPIs, but one KPI shows incorrect values. What is the most likely cause?

- A. The underlying Saved Search filter criteria are outdated.
- B. The dashboard theme is misconfigured.
- C. The user's time zone causes calculation drift.
- D. The portlet was refreshed too frequently.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation: KPI portlets depend on underlying Saved Search or report filters; outdated or incorrect criteria produce inaccurate dashboard values.
